---

### SECTION 8: Exposure controls/personal protection

---

#### 8.1. Control parameters

Workplace exposure limit values are not established.

#### 8.2. Exposure Control

##### 8.2.1. Appropriate engineering controls

Appropriate risk management measures, that must be adopted at the workplace, have to be selected and applied, following the risks assessment carried out by the employer, in connection with his working activity. If the results of this evaluation show that the general and collective prevention measures are not sufficient to reduce the risk, and if you cannot prevent exposure to the mixture by other measures, adequate personal protective equipment must be adopted, complying with relevant technical national/international standards.

##### 8.2.2. Individual protection measures, such as Personal Protective Equipment (PPE)

###### a) General protective and hygienic measures:

The usual precautionary measures are to be adhered to when handling chemicals or biological material.

###### b) Eye/face protection: Use of safety glasses is recommended.

###### c) Skin protection:

###### i) protection of hands

The glove material has to be impermeable and resistant to the product/the substance/the mixture. Due to missing tests no recommendation on the glove material can be given for the product/the substance/the mixture. Choose glove material with respect to penetration time, permeation rates and degradation. The selection of the suitable gloves does not only depend on the material, but also on further quality features and varies between manufacturers. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. Information about the exact penetration time should be received from the manufacturer of the protective gloves and has to be observed.

###### ii) other protective measures: not required
